

P3 and P4 Parents' Workshop 2022

Every Navalite A Leader

Self-Discipline | Integrity | Respect | Compassion | Learning

“Helping your child to Understand and Solve Word Problems”

*Slides of the workshop will be uploaded on the school's website **after 3 working days***

Outline of Workshop

Part 1

- MOE Math Framework
- Areas of Concern
- STAR Framework

Part 2

- Model Drawing
- Guess and Check
- Working Backwards
- The Must Have Approach
- Integration of ICT with Math

Every Navalite A Leader

Self-Discipline | Integrity | Respect | Compassion | Learning

MOE Math Framework

Every Navalite A Leader

Self-Discipline | Integrity | Respect | Compassion | Learning

Heuristics

- Act it out
- Use a diagram/model
- Guess and check
- Make a systematic list
- Look for pattern(s)
- Work backwards
- Make a supposition
- Simplify the problem

Thinking Skills

- Classifying
- Comparing
- Sequencing
- Analysing parts and whole
- Identifying patterns and relationship
- Induction
- Deduction
- Spatial visualisation

Every Navalite A Leader

Self-Discipline | Integrity | Respect | Compassion | Learning

P3 – P4 Areas of Concern

- **Problem Solving**

- Students' understanding of word problems
- Annotation / Chunking
- Applying the relevant heuristics to the problems
- Need to reinforce on model drawing skills
- Does not check on the reasonableness of their answers

- **Careless mistakes**

- Computation errors (multiplication and division)
- Number transfer errors
- Incomplete answers without units

Every Navalite A Leader

Self-Discipline | Integrity | Respect | Compassion | Learning

STAR Framework

Guiding questions for problem sums

- 1 What am I given?
- 2 What can I find out?
- 3 What am I looking for?

Heuristic Skills

- Drawing a diagram (Model Drawing)
 - Part-whole model
 - Comparison model

Every Navalite A Leader

Self-Discipline | Integrity | Respect | Compassion | Learning

Part Whole Model

John is 50 kg. Karen is 35 kg.
What is their total mass?

Workings:

Equations

Final Statement

Comparison Model

John's mass is 50 kg. Karen is 15 kg heavier than John. What is the mass of Karen?

John's mass is 50 kg. Karen is 15 kg lighter than John. What is the mass of Karen?

WHY Model Drawing?

- Visual representation of given information
- Helps students think logically using visual models to determine their computations
- Empowers students to think systematically and master more difficult problems
- Makes multi-step and multi-concept problems **easy to work**

Every Navalite A Leader

Standardisation across P2 – P6

1. Pencil & Ruler
2. Location: Start of the solution
3. 2 models: same starting line
4. Each unit must be of the same length (unitary model)
5. Label model

Every Navalite A Leader

Self-Discipline | Integrity | Respect | Compassion | Learning

STAR Approach to Problem-Solving

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Whole Numbers

Danny has \$321.

John has \$465 more than Danny.

How much money do they have altogether?

*We can use **comparison model** to show **who has more money** and find the **total amount they have**.*

Question 1

Step 1:

- What am I given? (facts/ information/ data)
- What can I find out?
- What am I looking for?

STAR Approach to Problem-Solving

| | | | |
|---|--|--|---|
| Step 1: <u>Study</u> and understand | Step 2: <u>Think</u> of a plan | Step 3: <u>Act</u> on the plan to solve your problem | Step 4: <u>Review</u> – Check your answer |
|---|--|--|---|

Whole Numbers

Question 1

Danny has \$321.

John has \$465 more than Danny.

How much money do they have altogether?

| Question | Visualising the model |
|--|--|
| How many quantities should there be in the model? What are they? | <ul style="list-style-type: none">➤ Two quantities➤ Bigger number, smaller number |
| How will the bars of each quantity look like? | <ul style="list-style-type: none">➤ One shorter bar➤ One longer bar |
| What values should I include in the model? | <ul style="list-style-type: none">➤ One short bar is \$321.➤ Difference between longer and shorter bar is \$465 |
| Where should I place the question mark in the model? | <ul style="list-style-type: none">➤ Right hand side of the model |

STAR Approach to Problem-Solving

| | | | |
|--|-----------------------------------|---|--|
| Step 1: <u>Study</u> and understand | Step 2: <u>Think</u> of a plan | Step 3: <u>Act</u> on the plan to solve your problem | Step 4: <u>Review</u> – Check your answer |
|--|-----------------------------------|---|--|

Whole Numbers

Question 1

Danny has \$321.

John has \$465 more than Danny.

How much money do they have altogether?

MODEL A

MODEL B

Which one is the correct model?

STAR Approach to Problem-Solving

| | | | |
|---|--|--|---|
| Step 1: <u>Study</u> and understand | Step 2: <u>Think</u> of a plan | Step 3: <u>Act</u> on the plan to solve your problem | Step 4: <u>Review</u> – Check your answer |
|---|--|--|---|

Whole Numbers

Question 1

Danny has \$321.

John has \$465 more than Danny.

How much money do they have altogether?

$$1 \text{ unit} = \$321$$

$$\begin{aligned} \text{John} &= \$321 + \$465 \\ &= \$786 \end{aligned}$$

$$\begin{aligned} \text{Total} &= \$321 + \$786 \\ &= \$1107 \end{aligned}$$

They had \$1107 altogether.

STAR Approach to Problem-Solving

| Step 1: <u>Study</u> and understand | Step 2: <u>Think</u> of a plan | Step 3: <u>Act</u> on the plan to solve your problem | Step 4: <u>Review</u> – Check your answer |
|--|-----------------------------------|---|--|
|--|-----------------------------------|---|--|

Total = \$1107
2 units = \$1107 - \$465
= \$642
1 unit = \$642 ÷ 2
= \$321
Danny has \$321 at first.

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Whole Numbers

The difference between two numbers is **80**.

The bigger number is **92**.

Find the sum of the two numbers.

There are 2 numbers.
A bigger number and a
smaller number.
The bigger number is 92.

Value of
the two
numbers

sum
add
altogether

Question 2

Step 1:

- What am I given? (facts/ information/ data)
- What can I find out?
- What am I looking for?

STAR Approach to Problem-Solving

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Whole Numbers

The difference between two numbers is 80.

The bigger number is 92.

Find the sum of the two numbers.

Question 2

Draw a comparison model

Question

Visualising the model

How many quantities should there be in the model?
What are they?

- Two quantities
- Bigger number, smaller number

How will the bars of each quantity look like?

- One longer bar
- One shorter bar

What values should I include in the model?

- One longer bar is 92.
- Difference between longer and shorter bar is 80

Where should I place the question mark in the model?

- Right hand side of the model.

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Whole Numbers

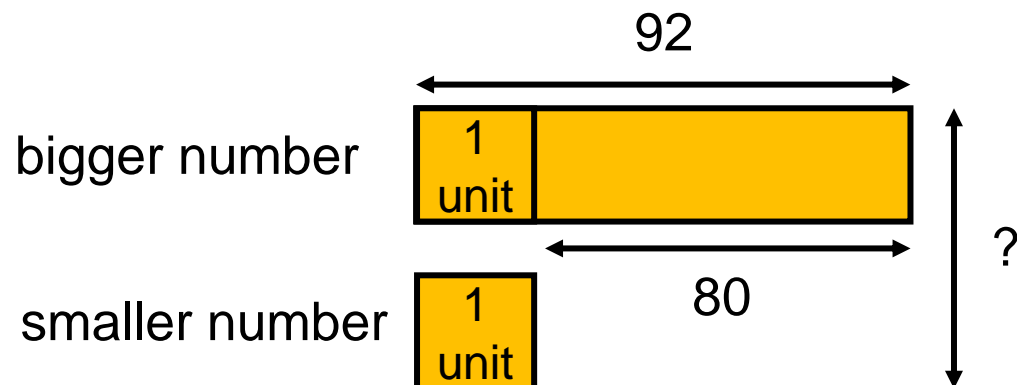

The difference between two numbers is **80**.

The bigger number is **92**.

Find the sum of the two numbers.

Question 2

Draw a comparison model

- Two quantities
- Bigger number, smaller number
- One longer bar
- One shorter bar
- One longer bar is 92.
- Difference between longer and shorter bar is 80
- Right hand side of the model.

| | | | |
|--|---|---|--|
| <p>Step 1: <u>Study</u> and understand</p> | <p>Step 2: <u>Think</u> of a plan</p> | <p>Step 3: <u>Act</u> on the plan to solve your problem</p> | <p>Step 4: <u>Review</u> – Check your answer</p> |
|--|---|---|--|

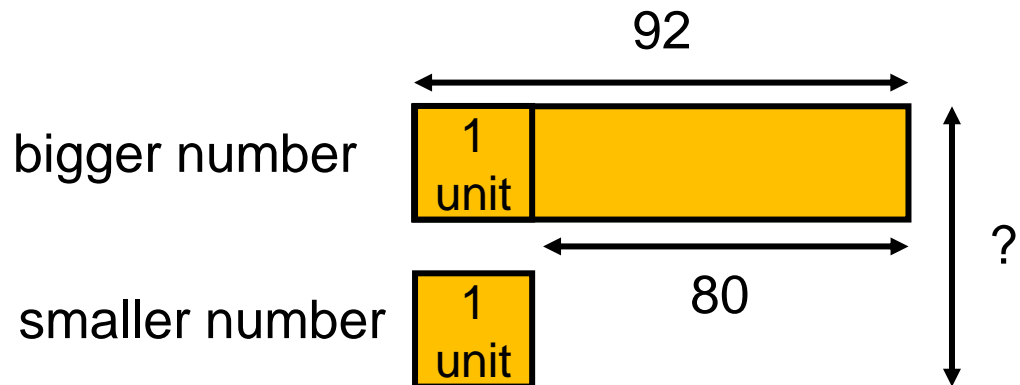

Whole Numbers

Question 2

The difference between two numbers is 80.

The bigger number is 92.

Find the sum of the two numbers.

bigger number = 92

smaller number = $92 - 80$
= 12

$12 + 92 = 104$

Ans = 104

| | |
|-------------|-------------|
| 92 | 12 |
| <u>- 80</u> | <u>+ 92</u> |
| 12 | 104 |

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Whole Numbers

The difference between two numbers is 80.

The bigger number is 92.

Find the sum of the two numbers.

Question 2

| | | |
|------------------------------------|---|---|
| bigger number = 92 | $\begin{array}{r} 92 \\ - 80 \\ \hline 12 \end{array}$ | $\begin{array}{r} 12 \\ - 92 \\ \hline 104 \end{array}$ |
| smaller number = $92 - 80$ = 12 | | |
| $12 + 92 = 104$ | $\begin{array}{r} 104 \\ - 12 \\ \hline 92 \end{array}$ | $\begin{array}{r} 92 \\ + 12 \\ \hline 104 \end{array}$ |
| Ans = <u>104</u> | | |

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Whole Numbers

Question 3

Janice, Imran and Krishnan had a total of **126** marbles.

2×1
Janice had twice as many marbles as Imran.

2×1
Krishnan had twice as many marbles as Janice.

How many marbles did Imran have?

Step 1:

- What am I given? (facts/ information/ data)
- What can I find out?
- What am I looking for?

twice means
 2×1

Figure out the number
of units that each
person had.

STAR Approach to Problem-Solving

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Whole Numbers

Question 3

Janice, Imran and Krishnan had a total of **126** marbles.

Janice had ^{2 x 1}twice as many marbles as Imran.

Krishnan had ^{2 x 1}twice as many marbles as Janice.

How many marbles did Imran have?

Question

Visualising the model

How many quantities should there be in the model?
What are they?

- Three quantities
- J, I, K

How will the bars of each quantity look like?

- J: 2 units , I: 1 unit
- K: 2 units , J: 1 unit.

What values should I include in the model?

- J, I, K has 126 marbles.

Where should I place the question mark?

- on I

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Whole Numbers

Question 3

Janice, Imran and Krishnan had a total of **126** marbles.

Janice had ^{2 x 1}twice as many marbles as Imran.

Krishnan had ^{2 x 1}twice as many marbles as Janice.

How many marbles did Imran have?

- Three quantities
- J, I, K
- J: 2 units , I: 1 unit
- K: 2 units , J: 1 unit.
- J, I, K has 126 marbles.
- on I

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Whole Numbers

Question 3

Janice, Imran and Krishnan had a total of **126** marbles.

Janice had ^{2 x 1}twice as many marbles as Imran.

Krishnan had ^{2 x 1}twice as many marbles as Janice.

How many marbles did Imran have?

$$\begin{aligned}
 7 \text{ units} &= 126 \\
 1 \text{ unit} &= 126 \div 7 \\
 &= 18 \\
 \text{Ans} &= \underline{18}
 \end{aligned}$$

$$\begin{array}{r}
 \underline{\quad} 18 \\
 7 \overline{) 126} \\
 \underline{- 7} \\
 56 \\
 \underline{- 56} \\
 00
 \end{array}$$

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Whole Numbers

Question 3

Janice, Imran and Krishnan had a total of **126** marbles.

Janice had ^{2 x 1}twice as many marbles as Imran.

Krishnan had ^{2 x 1}twice as many marbles as Janice.

How many marbles did Imran have?

$$7 \text{ units} = 126$$

$$1 \text{ unit} = 126 \div 7$$

$$= 18$$

$$I \rightarrow 18$$

$$J \rightarrow 18 \times 2 = 36$$

$$K \rightarrow 18 \times 4 = 72$$

$$\text{Total} \rightarrow 18 + 36 + 72 = 126$$

$$\begin{array}{r} 18 \\ 7 \overline{) 126} \\ \underline{- 7} \\ 56 \\ \underline{- 56} \\ 00 \end{array}$$

STAR Approach to Problem-Solving

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Whole Numbers

Rebecca, Akid and Bala had a total of 135 stamps.

Rebecca had twice as many stamps as Akid.

Bala had three times as many stamps as Rebecca.

How many stamps did Rebecca have?

What am I given? (facts/ information/ data)

There are 3 people.

The total number of stamps that the 3 people had was 135.

Rebecca: 2 units; Akid 1 unit.

Bala: 3 parts; Rebecca 1 part.

What can I find out?

The number of equal units each of them had.

The number of equal units that represent 135 stamps.

What am I looking for?

The number of stamps that Rebecca had (how many units?).

Question 4

Step 1:

- What am I given? (facts/ information/ data)
- What can I find out?
- What am I looking for?

STAR Approach to Problem-Solving

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Whole Numbers

Rebecca, Akid and Bala had a total of 135 stamps.

Rebecca had **twice** as many stamps as Akid.

Bala had **three times** as many stamps as Rebecca.

How many stamps did Rebecca have?

Question 4

STAR Approach to Problem-Solving

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Whole Numbers

Question 4

Rebecca, Akid and Bala had a total of 135 stamps.

Rebecca had twice as many stamps as Akid.

Bala had three times as many stamps as Rebecca.

How many stamps did Rebecca have?

$$9 u = 135$$

$$1 u = 135 \div 9$$
$$= 15$$

$$2 u = 15 \times 2$$
$$= \underline{30}$$

| | | | |
|--|---|---|--|
| <p>Step 1: <u>Study</u> and understand</p> | <p>Step 2: <u>Think</u> of a plan</p> | <p>Step 3: <u>Act</u> on the plan to solve your problem</p> | <p>Step 4: <u>Review</u> – Check your answer</p> |
|--|---|---|--|

Whole Numbers

Question 4

Rebecca, Akid and Bala had a total of 135 stamps.

Rebecca had twice as many stamps as Akid.

Bala had three times as many stamps as Rebecca.

How many stamps did Rebecca have?

$$9 u = 135$$

$$1 u = 135 \div 9$$

$$= 15$$

$$2 u = 15 \times 2$$

$$= \underline{30}$$

Review:

$$1 u = 15$$

$$15 \times 9 = 135 (\checkmark)$$

STAR Approach to Problem-Solving

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Whole Numbers

Shelley, Keene and Chris had a total of 104 sweets.

Shelley had **twice** as many sweets as Keene.

Chris had **24 more** sweets than Shelley.

How many sweets did Chris have?

What am I given? (facts/ information/ data)

There are 3 people.

The total number of sweets that the 3 people have is 104.

Shelley: 2 units; Keene: 1 unit.

Chris has 24 sweets more than Shelley.

What can I find out?

Number of equal units and 'known part' that is equal to 104. (Known apart = 24)

What am I looking for?

The number of sweets that Chris had. (How many units and known parts?)

Question 5

Step 1:

- What am I given? (facts/ information/ data)
- What can I find out?
- What am I looking for?

| | | | |
|---|--|--|---|
| <p>Step 1: <u>Study</u> and understand</p> | <p>Step 2: <u>Think</u> of a plan</p> | <p>Step 3: <u>Act</u> on the plan to solve your problem</p> | <p>Step 4: <u>Review</u> – Check your answer</p> |
|---|--|--|---|

Whole Numbers

Question 5

Shelley, Keene and Chris had a total of 104 sweets.

Shelley had twice as many sweets as Keene.

Chris had 24 more sweets than Shelley.

How many sweets did Chris have?

STAR Approach to Problem-Solving

| | | | |
|--|-----------------------------------|---|--|
| Step 1: <u>Study</u> and understand | Step 2: <u>Think</u> of a plan | Step 3: <u>Act</u> on the plan to solve your problem | Step 4: <u>Review</u> – Check your answer |
|--|-----------------------------------|---|--|

Whole Numbers

Question 5

Shelley, Keene and Chris had a total of 104 sweets.

Shelley had twice as many sweets as Keene.

Chris had 24 more sweets than Shelley.

How many sweets did Chris have?

$$5 u = 104 - 24$$
$$= 80$$

$$1 u = 80 \div 5$$
$$= 16$$

$$2 u = 16 \times 2$$
$$= 32$$

$$\text{Chris} \rightarrow 32 + 24 = \underline{56}$$

| | | | |
|--|-----------------------------------|---|--|
| Step 1: <u>Study</u> and understand | Step 2: <u>Think</u> of a plan | Step 3: <u>Act</u> on the plan to solve your problem | Step 4: <u>Review</u> – Check your answer |
|--|-----------------------------------|---|--|

Whole Numbers

Question 5

Shelley, Keene and Chris had a total of 104 sweets.

Shelley had twice as many sweets as Keene.

Chris had 24 more sweets than Shelley.

How many sweets did Chris have?

$$5 u = 104 - 24$$

$$= 80$$

$$1 u = 80 \div 5$$

$$= 16$$

$$2 u = 16 \times 2$$

$$= 32$$

$$\text{Chris} \rightarrow 32 + 24 = \underline{56}$$

Review:

$$\text{Total} \rightarrow 56 + 32 + 16 = 104 (\checkmark)$$

Whole Numbers: *Before-and-After* Concept

- 2 quantities are equal at first, in the end, or receive the same quantity of something in the middle.
- Keywords like "after", "at first", "in the end" and "equal".
- Do not be confused with *Work Backwards* method, where information of "before" situation is not given at all.

A) Before-and-After Concept: *Difference Unchanged*

Ahmad had \$130 and his sister had \$45. After their father gave each of them an equal amount of money, Ahmad had twice as much money as his sister. How much did their father give to each of them?

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Before-and-After (Difference Unchanged)

Question 6

Ahmad had \$130 and his sister had \$45. After their father gave each of them an equal amount of money, Ahmad had twice as much money as his sister. [How much did their father give to each of them?]

Step 1:

- What am I given? (facts/ information/ data)
- What can I find out?
- What am I looking for?

Example

- $\$135 - \$50 = \$85$
- $\$140 - \$55 = \$85$

- Ahmad had \$85 more than his sister.
- As their father gave them the same amount of money, Ahmad will still have \$85 more than his sister.

STAR Approach to Problem-Solving

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Question 6

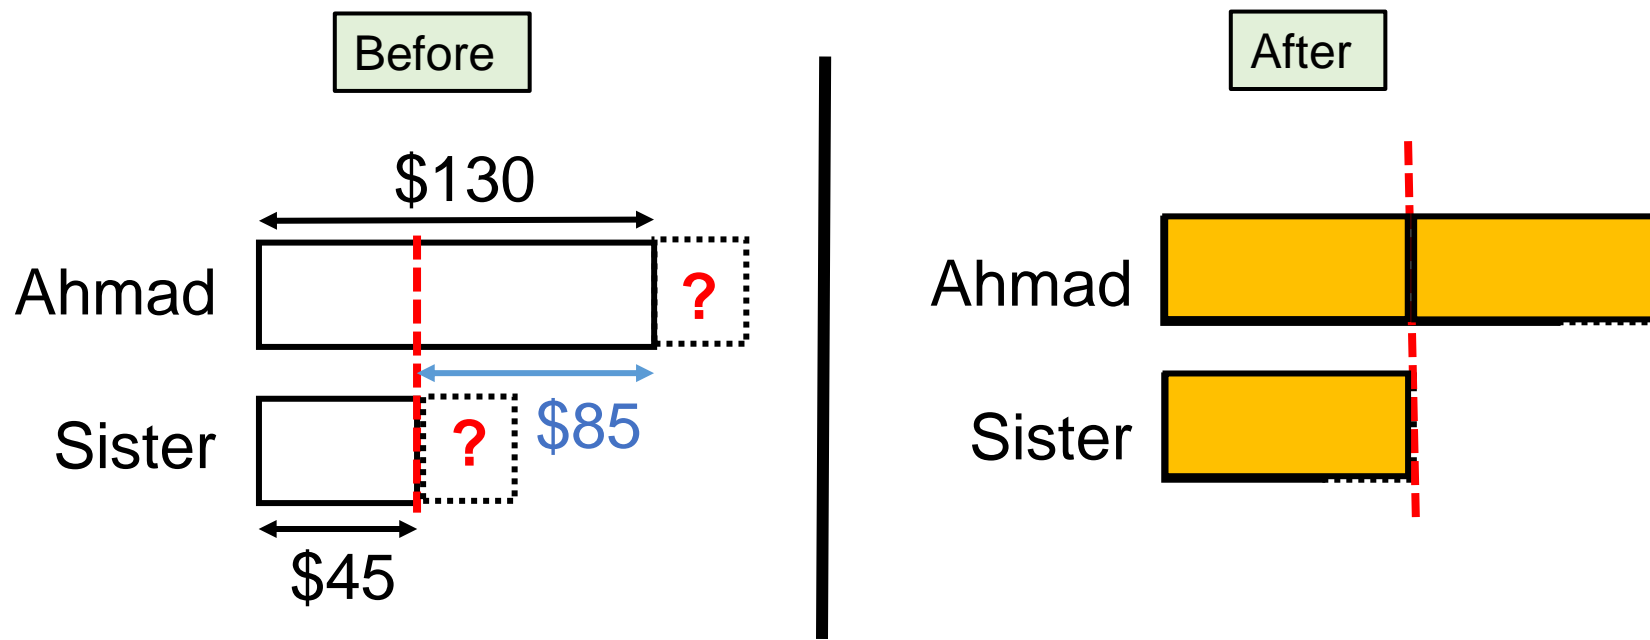

Ahmad had \$130 and his sister had \$45. After their father gave each of them an equal amount of money, Ahmad had twice as much money as his sister. How much did their father give to each of them?

| Question | Visualising the model |

Ahmad had \$130 and his sister had \$45. After their father gave each of them an equal amount of money, Ahmad had twice as much money as his sister.

[How much did their father give to each of them?]

$$\begin{aligned}
 \$130 - \$45 &= \$85 \\
 \$85 - \$45 &= \underline{\$40}
 \end{aligned}$$

| | | | |
|--|---|---|--|
| <p>Step 1: <u>Study</u> and understand</p> | <p>Step 2: <u>Think</u> of a plan</p> | <p>Step 3: <u>Act</u> on the plan to solve your problem</p> | <p>Step 4: <u>Review</u> – Check your answer</p> |
|--|---|---|--|

Whole Numbers: Before and After (Difference Unchanged)

Question 6

Ahmad had \$130 and his sister had \$45. After their father gave each of them an equal amount of money, Ahmad had twice as much money as his sister.

How much did their father give to each of them?

$$\$130 + \$40 = \$170$$

(Ahmad's money)

$$\$45 + \$40 = \$85$$

(Sister's money)

$$\$170 \div 2 = \$85 \text{ or}$$

$$\$85 \times 2 = \$170$$

B) Before-and-After Concept: Total Unchanged *(Internal Transfer)*

Ali had 1260 stickers. Bala had 480 fewer stickers than Ali. Ali gave some stickers to Bala. In the end, Bala had 3 times as many stickers as Ali. How many stickers did Ali have in the end?

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Before and After Model: Total Unchanged (Internal Transfer)

Question 7

Ali had 1260 stickers. Bala had 480 fewer stickers than Ali. Ali gave some stickers to Bala.

In the end, Bala had 3 times as many stickers as Ali. [How many stickers did Ali have in the end?]

Step 1:

- What am I given? (facts/ information/ data)
- What can I find out?
- What am I looking for?

Total number of stickers both of them had is the same no matter how many Ali gave to Bala.

- *How many stickers did Bala have?*
- *What was the total number of stickers they had?*

STAR Approach to Problem-Solving

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Ali had 1260 stickers. Bala had 480 fewer stickers than Ali. Ali gave some stickers to Bala. In the end, Bala had 3 times as many stickers as Ali.

Question 7

How many stickers did Ali have in the end?

| Question | Visualising the model |
|--|--|
| How many quantities should there be in the model? What are they? | <ul style="list-style-type: none">➤ Two quantities➤ Ali, Bala |
| How do the bars of each quantity look like? | <ul style="list-style-type: none">➤ Ali's bar is longer➤ Bala's bar is shorter (fewer stickers) |
| Must I make some changes to the bars later? Why? | Yes, because Ali gave some of his stickers to Bala. |
| How will the model look like in the end? | <ul style="list-style-type: none">➤ Bala's bar will be longer than Ali's.➤ Bala will have 3 parts while Ali will have 1 part. |

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Before-and-After Model: Total Unchanged (Internal Transfer)

Question 7

Ali had 1260 stickers. Bala had 480 fewer stickers than Ali. Ali gave some stickers to Bala. In the end, Bala had 3 times as many stickers as Ali. How many stickers did Ali have in the end?

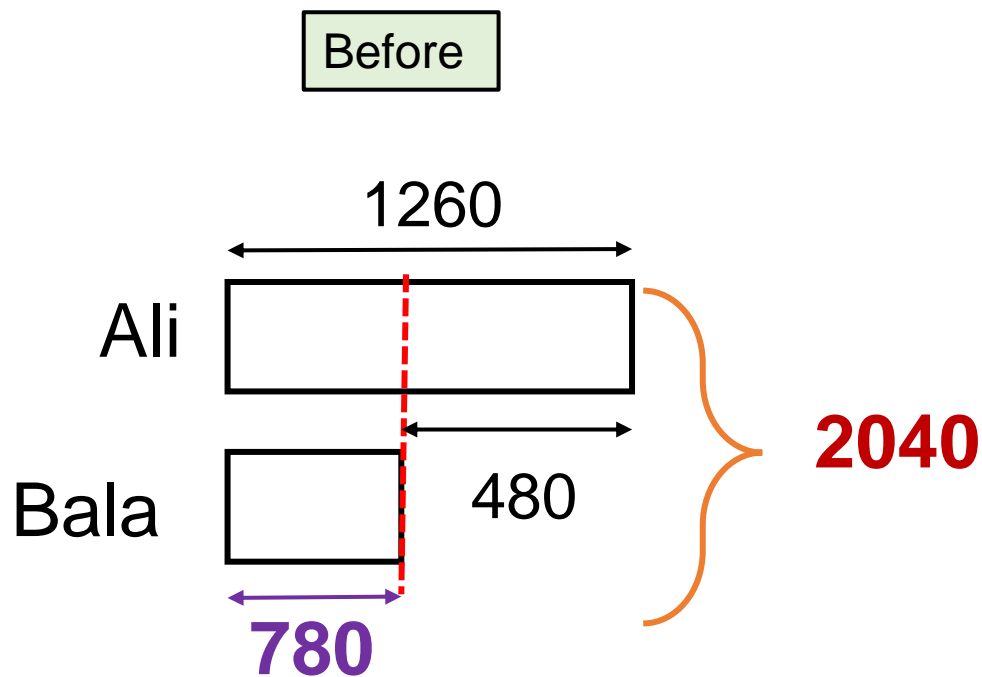

| | | | |
|--|---|---|--|
| <p>Step 1: <u>Study</u> and understand</p> | <p>Step 2: <u>Think</u> of a plan</p> | <p>Step 3: <u>Act</u> on the plan to solve your problem</p> | <p>Step 4: <u>Review</u> – Check your answer</p> |
|--|---|---|--|

Before-and-After Model: Total Unchanged (Internal Transfer)

Question 7

Ali had 1260 stickers. Bala had 480 fewer stickers than Ali. Ali gave some stickers to Bala. In the end, Bala had 3 times as many stickers as Ali. How many stickers did Ali have in the end?

$$1260 - 480 = 780$$

(Bala had 780 stickers)

$$1260 + 780 = 2040$$

(total number of stickers)

Before-and-After Model: Total Unchanged (Internal Transfer)

Question 7

Ali had 1260 stickers. Bala had 480 fewer stickers than Ali. Ali gave some stickers to Bala. In the end, Bala had 3 times as many stickers as Ali. How many stickers did Ali have in the end?

$$1260 - 480 = 780$$

(Bala had 780 stickers)

$$1260 + 780 = 2040$$

(total number of stickers)

$$2040 \div 4 = \underline{\underline{510}}$$

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Before and After: Total Unchanged (Internal Transfer)

Question 7

Ali had 1260 stickers. Bala had 480 fewer stickers than Ali. Ali gave some stickers to Bala. In the end, Bala had 3 times as many stickers as Ali. How many stickers did Ali have in the end?

$$510 \times 4 = 2040$$

Guess and Check

This is also called 'trial and error'.

- We guess the answer to a problem and check if the answer fits the **given conditions**.
- We repeat this process with reasonable guesses until we reach an answer that satisfies all the conditions.
- 2 variables
- Total number of the 2 variables
- Total value of all the variables

Guess and Check

A farmer has 24 rabbits and ducks in his farm.

There are 66 legs in all.

How many ducks does he have?

- ✓ 24 animals (rabbits and ducks)
 - ✓ 66 legs

 - ✓ Number of ducks

 - ✓ Number of rabbits
 - ✓ Number of ducks
 - ✓ Rabbit has 4 legs
 - ✓ Chicken has 2 legs
- } 66 legs in all

Question 8

Step 1:

- What am I given? (facts/ information/ data)
- What can I find out?
- What am I looking for?

| Step 1: <u>Study</u> and understand | Step 2: <u>Think</u> of a plan | Step 3: <u>Act</u> on the plan to solve your problem | Step 4: <u>Review</u> – Check your answer |
|--|-----------------------------------|---|--|
|--|-----------------------------------|---|--|

Guess and Check

A farmer has 24 rabbits and ducks in his farm.

} **2 variables**

There are 66 legs in all.

How many ducks does he have?

✓ 2 variables – Rabbits and ducks

✓ Total number of the 2 variables – 24 animals

✓ Total value of all the variable -66 legs

} **condition**

Question 8

Step 2:

- What strategy should I use?

We will use **Guess and Check Strategy** to find possible combinations of correct number of rabbits and ducks.

| | | | |
|--|-----------------------------------|---|--|
| Step 1: <u>Study</u> and understand | Step 2: <u>Think</u> of a plan | Step 3: <u>Act</u> on the plan to solve your problem | Step 4: <u>Review</u> – Check your answer |

Guess and Check

DRAW A TABLE

Question 8

A farmer has 24 rabbits and ducks in his farm.

There are 66 legs in all.

How many ducks does he have?

Step 3:

I will draw a guess and check table

| No. of rabbits | No. of rabbit legs | No. of ducks | No. of duck legs | Total no. of legs | Check |
|----------------|--------------------|--------------|--------------------|-------------------|-------|
| 12 | $12 \times 4 = 48$ | 12 | $12 \times 2 = 24$ | $48 + 24 = 72$ | X |
| 10 | $10 \times 4 = 40$ | 14 | $14 \times 2 = 28$ | $40 + 28 = 68$ | X |
| 9 | $9 \times 4 = 36$ | 15 | $15 \times 2 = 30$ | $36 + 30 = 66$ | ✓ |

STAR Approach to Problem-Solving

Step 1:
Study and understand

Step 2:
Think of a plan

Step 3:
Act on the plan to solve your problem

Step 4:
Review – Check your answer

Guess and Check

A farmer has 24 rabbits and ducks in his farm.

There are 66 legs in all.

How many ducks does he have?

Answer : 15 ducks

| No. of rabbits | No. of rabbit legs | No. of ducks | No. of duck legs | Total no. of legs | Check |
|----------------|--------------------|--------------|--------------------|-------------------|-------|
| 12 | $12 \times 4 = 48$ | 12 | $12 \times 2 = 24$ | $48 + 24 = 72$ | X |
| 10 | $10 \times 4 = 40$ | 14 | $14 \times 2 = 28$ | $40 + 28 = 68$ | X |
| 9 | $9 \times 4 = 36$ | 15 | $15 \times 2 = 30$ | $36 + 30 = 66$ | ✓ |

Question 8

Step 4:

- Have I answered the question?
- Is my answer reasonable / make sense?
- Have I checked my answers?
- Review

Review

$9 + 15 = 24$ rabbits and ducks ✓

$9 \times 4 = 36$ rabbit legs

$15 \times 2 = 30$ duck legs

$36 + 30 = 66$ legs ✓

STAR Approach to Problem-Solving

|--|-----------------------------------|---|--|

Guess and Check

Susie bought 16 books and pens for a total of \$102.

Each book cost \$7 and each pen cost \$5.

How many books did she buy?

- ✓ 16 books and pens
- ✓ Total cost - \$102
- ✓ Book - \$7
- ✓ Pen - \$5

✓ Number of books

- ✓ Number of books
 - ✓ Number of pens
- } 16

Question 9

Step 1:

- What am I given? (facts/ information/ data)
- What can I find out?
- What am I looking for?

| | | | |
|--|---|---|--|
| <p>Step 1: <u>Study</u> and understand</p> | <p>Step 2: <u>Think</u> of a plan</p> | <p>Step 3: <u>Act</u> on the plan to solve your problem</p> | <p>Step 4: <u>Review</u> – Check your answer</p> |
|--|---|---|--|

Guess and Check

Susie bought 16 books and pens for a total of \$102. } **2 variables**

Each book cost \$7 and each pen cost \$5.

How many books did he buy?

- ✓ 2 variables – Books and pens
- ✓ Total number of the 2 variables - 16
- ✓ Total value of all the variable - \$102 } **condition**

We will use **Guess and Check Strategy** to find possible combinations of correct number of books and pens.

Question 9

Step 2:

- What strategy should I use?

| | | | |
|--|-----------------------------------|---|--|

|--|-----------------------------------|---|--|

Guess and Check

DRAW A TABLE

Question 9

Susie bought 16 books and pens for a total of \$102.

Each book cost \$7 and each pen cost \$5.

How many books did he buy?

Step 3:

I will draw a guess and check table

| No. of books | Cost of books | No. of pens | Cost of pens | Total Cost | Check |
|--------------|--------------------|-------------|-------------------|-----------------|-------|
| 8 | $8 \times 7 = 56$ | 8 | $8 \times 5 = 40$ | $56 + 40 = 96$ | X |
| 9 | $9 \times 7 = 63$ | 7 | $7 \times 5 = 35$ | $63 + 35 = 98$ | X |
| 11 | $11 \times 7 = 77$ | 5 | $5 \times 5 = 25$ | $77 + 25 = 102$ | √ |

STAR Approach to Problem-Solving

| | | | |
|---|--|--|---|
| Step 1: <u>Study</u> and understand | Step 2: <u>Think</u> of a plan | Step 3: <u>Act</u> on the plan to solve your problem | Step 4: <u>Review</u> – Check your answer |
|---|--|--|---|

Guess and Check

Susie bought 16 books and pens for a total of \$102.

Each book cost \$7 and each pen cost \$5.

How many books did he buy?

Answer : 11 books

| No. of books | Cost of books | No. of pens | Cost of pens | Total Cost | Check |
|--------------|--------------------|-------------|-------------------|-----------------|-------|
| 8 | $8 \times 7 = 56$ | 8 | $8 \times 5 = 40$ | $56 + 40 = 96$ | X |
| 9 | $9 \times 7 = 63$ | 7 | $7 \times 5 = 35$ | $63 + 35 = 98$ | X |
| 11 | $11 \times 7 = 77$ | 5 | $5 \times 5 = 25$ | $77 + 25 = 102$ | ✓ |

Question 9

Step 4:

- Have I answered the question?
- Is my answer reasonable / make sense?
- Have I checked my answers?
- Review

Review

$11 + 5 = 16$ books and pens

$11 \times 7 = \$77$ cost of books

$5 \times 5 = \$25$ cost of pens

$\$77 + \$25 = \$102$

Working Backwards

- Used when none or little information is given to understand the 'Before' situation
- All or most the information given is for the 'After' situation

Review – Check your answer

Working Backwards

Question 10

Cindy and Eve had \$60 altogether. After Cindy gave Eve \$12 and Eve gave Cindy \$10, Cindy had three times as much money as Eve. How much money did each of them have at first?

Using model to visually represent data

After

4 units = 60
 1 unit = 15

After the exchange, Eve had \$15 and Cindy had \$45.

Using data from the model and a diagram to work backwards

| | | | |
|--|---|---|--|
| <p>Step 1: <u>Study</u> and understand</p> | <p>Step 2: <u>Think</u> of a plan</p> | <p>Step 3: <u>Act</u> on the plan to solve your problem</p> | <p>Step 4: <u>Review</u> – Check your answer</p> |

Question 10

Working Backwards

Cindy and Eve had \$60 altogether. After Cindy gave Eve \$12 and Eve gave Cindy \$10, Cindy had three times as much money as Eve. How much money did each of them have at first?

final answer?

$47 + 13 = 60$

Cindy had \$47 while Eve had \$13 at first.

The Must Have Approach

- ✓ **Encourage Growth Mindset**
Be positive about Math. Allow and learn from mistakes.
- ✓ **Provide guidance, not the solutions**
Give a step and ask a question to lead your child towards solving the problem.
- ✓ **Give encouragement**
Praise your child.

Every Navalite A Leader

Self-Discipline | Integrity | Respect | Compassion | Learning

The Must Have Approach

- ✓ **Make Math relevant in real life**
Application of math knowledge and skills
- ✓ **Teach concepts**
Guide your child in understanding the concepts first and reinforce with practice
- ✓ **Choice of learning resources i.e. assessment books**

Problem Solving Games
These resources provide fun, free problem solving teaching ideas and activities for primary aged children. They will help children to reason mathematically, a vital skill if they are to learn to solve problems.

Bead Numbers - Place Value
Bead Numbers is a place value investigation involving a tens and ones abacus. The game provides a good context for encouraging learners to think systematically.

Countdown Game
Test your mental maths agility and skills on this Countdown game. There are different

FAQ

1. Will 'assumption method' be taught to the students?

Assumption method is also known as 'making suppositions' in the list of heuristics. It will be taught to the students at the upper primary (P5 & P6) levels.

2. Do teachers encourage students to use Guess and Check to solve problems?

There are different ways to solve a problem. Students are often introduced to alternative solutions for each problem in daily lessons. Some solutions may be more efficient than another depending on the given problem. Overall, students can choose how they want to solve a problem as long as the method is reasonable.

Every Navalite A Leader

Self-Discipline | Integrity | Respect | Compassion | Learning

FAQ

3. What is the working that students need to show on the paper other than the model are students marked on working to present?

Students need to show their equations clearly to show their thinking process in solving the problem. This allows teachers to understand the students' thoughts and method marks will be awarded for correct steps taken should the final answer be incorrect.

4. How can parents help students who take a longer time to understand word problems?

We would strongly encourage parents to guide your child to draw models as a visual representation of what they have understood. After which, use the 3 guiding questions to scaffold their thinking process. This has to be done regularly for students to get better in the problem-solving process.
